

Company Profile

Based in the Midlands and London, Design With Nature provides clients with ecologically informed landscape design solutions which create rich robust, cost effective, sustainable environments for both people and wildlife. This is done by working with natural processes and using local materials to create places with a strong local identity. The overall approach to projects is very much influenced by the philosophy outlined in 'Design With Nature' by Ian Mcharg. Clients include local authorities, public bodies, architects, construction companies, private individuals and businesses. Environmental and social responsibility is central to everything the practice does. When executing projects we take into account our client's requirements, the site, natural systems as well as site users.
